

A geospatial planning assistant for Puerto Rico communities. Five screens, each built around a real question a community member or planner would ask — and each showing the thing that makes the product defensible: **every claim is labelled by how it was established, and traceable to the document or layer it came from.**

A Identity

MARK · PALETTE · TYPE

MARK & WORDMARK

Mappealo

Mappealo

A graticule with a single marker set on Puerto Rico. The name stays untranslated in both languages.

PALETTE

Jungle Verified Computed Inferred Hazard Limestone

Three of the six colors are load-bearing: they encode how a fact was established. Coral is reserved for hazard. Nothing is decorative.

TYPOGRAPHY

¿Qué puedo construir aquí?

Interface and body text stays plain and legible at small sizes, in both languages.

2.4 KM · 18.03° N, 66.85° W

Serif display borrows from printed planning documents — the authority the tool cites. Mono carries every measured value.

Not every statement in an answer is established the same way. A distance the system measured is not the same kind of fact as a zone classification read off an official layer. The interface labels each one, so a reader can tell at a glance what to rely on — and a single answer can carry more than one tier.

● Verificado

Stated in an official source

Read directly from a government layer or quoted from an adopted plan. The strongest claim the tool makes.

EX · “Dentro de zona inundable FEMA 2009”
FUENTE · Capa oficial FEMA

● Calculado

Measured by the system

Computed geometrically — distance, count, overlap. Accurate as arithmetic, but the method and its limits are stated.

EX · “2.4 km en línea recta”
MÉTODO · Distancia euclidiana, no por carretera

● Inferido

Synthesized from document text

Summarized or interpreted from prose in a plan. Always paired with the passage it came from so a reader can check it.

EX · “El plan prioriza vivienda resiliente”
FUENTE · Plan de Mitigación, secc. 4.6

● Sin dato

Not in the library

The documents do not answer it. The tool says so and routes the user onward — and shows no citations.

EX · “No hay información suficiente”
ACCIÓN · Remite a Junta de Planificación / OGPe

01 **Landing & entry**

01 **Bilingual from the first touch**

The day-one question, asked plainly. No jargon, no account, no empty text box.

THE QUESTION THIS SCREEN IS BUILT FOR

“What information should I review to determine what can be built on a piece of land in Puerto Rico?”

mappealo.org

Mappealo

Mapa

Datos

Sobre

ES

EN

¿Qué necesitas saber sobre un terreno en Puerto Rico?

Pregunta en español o inglés. Cada respuesta indica de dónde viene y qué tan firme es el dato.

¿Qué debo revisar para saber qué se puede construir en un terreno?

¿Puedo construir en zona inundable?

¿Dónde están los refugios?

Explorar el mapa →

municipios

84

planes cargados

100%

con fuente

1 One question, front and centre

The search bar is pre-filled with the day-one question rather than a blank prompt.

2 Genuinely bilingual

ES/EN switches the whole product — interface, layer names, and the answer — not browser translate.

3 Counts as proof

Coverage stated up front, drawn live from the database.

02

Confidence-tiered answer

SCREEN 2 OF 5

02

Two kinds of fact in one answer

A measured distance and an official classification, each labelled for what it is.

THE QUESTION THIS SCREEN IS BUILT FOR

“Which hospital or health center is closest in a straight line to this Yabucoa community, and is that facility inside a flood or landslide zone?”

mappealo.org/mapa/yabucoa

Mappealo

ES EN

¿Cuál hospital o centro de salud está más cerca en línea recta de esta comunidad en Yabucoa, y está dentro de zona inundable o de deslizamiento?

MAPPEALO

El centro de salud más cercano es el **CDT de Yabucoa**.

2.4 km

CALCULADO

Distancia en línea recta desde el centroide de la comunidad. No es distancia por carretera ni tiempo de viaje.

En zona inundable

VERIFICADO

El CDT cae dentro de la zona inundable FEMA FIRM 2009 [1]. Fuera de zona susceptible a deslizamientos [2].

FUENTES

-  Zonas inundables FEMA FIRM · 2009
-  Susceptibilidad a deslizamientos USGS · 2020
-  Hospitales y CDTs · Depto. de Salud

¿Y el siguiente más cercano fuera de zona inundable?

Punto

Área

Medir

Capas (3)

1 The contrast is the point

Amber "calculado" beside teal "verificado" shows, without explanation, that these are different kinds of claim.

4 Follow-up is anticipated

"The next closest one outside a flood zone" is offered as the natural next question.

2 Method stated, not buried

"Straight line, not by road" appears with the number — the limitation travels with the fact.

3 The map proves the measurement

The dashed line on the map is the same 2.4 km stated in the answer.

03 Map selection drives the question

SCREEN 3 OF 5

03 Draw an area, ask about what's inside it

The hybrid moment: the map supplies the context the question depends on.

THE QUESTION THIS SCREEN IS BUILT FOR

“For the community outlined on the map in Naranjito, identify bridges and road segments exposed to flooding or landslides.”

mappealo.org/mapa/naranjito

Mappealo

ES EN

SELECCIÓN EN MAPA · 4.2 km²

Para la comunidad delimitada en el mapa, identifica puentes y segmentos de carretera expuestos a inundación o deslizamiento.

MAPPEALO

Dentro del área seleccionada hay **3 puentes** y **6.8 km** de carretera estatal.

2 de 3 puentes expuestos

CALCULADO

Intersección geométrica entre la capa de puentes y las zonas de riesgo dentro del polígono dibujado.

3.1 km en zona inundable

VERIFICADO

PR-164 y PR-152 cruzan zona inundable FEMA 2009 [1]. 1.4 km adicionales en ladera susceptible a deslizamiento [2].

Ruta de evacuación afectada

INFERIDO

El plan municipal identifica la PR-164 como vía de acceso crítica para esta zona [3].

FUENTES

- Carreteras estatales · 2021
- Zonas inundables FEMA · 2009
- Plan de Mitigación — Naranjito · 2021

Escribe tu pregunta...

Punto

Área

Medir

Borrar selección

🏠 Área seleccionada · 4.2 km²

1 Selection is a first-class input

The drawn polygon appears in the conversation as a tagged chip, so the answer's scope is explicit and re-runnable.

2 Three tiers in one answer

Counted intersections, an official classification, and an inference from the municipal plan — each marked.

3 The map renders the finding

Exposed segments and bridges highlight in place; the answer and the map never disagree.

04 Reasoning across domains

SCREEN 4 OF 5

04 One question, five datasets

Cadastre, zoning, hazard, mobility and public services
resolved into a single comparison.

THE QUESTION THIS SCREEN IS BUILT FOR

“Compare the four selected lots for a community center based on size, permitted use, risks, pedestrian access, and proximity to schools and health centers.”

mappealo.org/comparar

Mappealo

ES EN

Cuatro solares · Centro comunitario

4 seleccionados en el mapa

5 conjuntos de datos combinados

CRITERIO	SOLAR A · BO. PALMAS	SOLAR B · BO. RÍO	SOLAR C · CENTRO	SOLAR D · BO. CEDRO
TAMAÑO ● VER	1,240 m²	2,180 m²	960 m²	1,510 m²
USO PERMITIDO ● VER	Residencial	Dotacional	Dotacional	Rústico común
INUNDACIÓN ● VER	Zona AE	Fuera	Fuera	Zona AE
DESLIZAMIENTO ● VER	Bajo	Bajo	Bajo	Alto
ACCESO PEATONAL ● CAL	340 m a parada	120 m a parada	90 m a parada	1,100 m
ESCUELAS <1 KM ● CAL	2	3	4	0
SALUD <2 KM ● CAL	1	1	2	0

MAPPEALO

Solar B es el más adecuado

● INFERIDO

Es el único que combina tamaño suficiente, uso dotacional permitido y ubicación fuera de zona inundable. Solar C tiene mejor acceso a servicios pero menos de la mitad del área. Solares A y D quedan descartados por riesgo.

Esta recomendación es una síntesis, no una determinación regulatoria. Cada dato de origen está marcado arriba y enlazado abajo.

FUENTES

Catastro CRIM · 2023 · Plan de Uso de Terrenos · 2015
FEMA FIRM · 2009 · Deslizamientos USGS · 2020
Escuelas · 2021 · Hospitales y CDTs · 2023

1 Tier labels sit on the criteria
Every row declares whether it was read from a source or measured — the taxonomy scales to tables, not just prose.

2 The recommendation is marked “inferred”
The synthesis is explicitly the softest claim on the screen, and says so.

3 Six datasets, one answer
Cadastre, zoning, two hazard layers, transit and public facilities resolved together.

05 Source & plain language

SCREEN 5 OF 5

05 The regulation, and what it actually means

Exact cited text on one side, plain-language conditions on the other. Never one without the other.

THE QUESTION THIS SCREEN IS BUILT FOR

“For the selected parcel, cite the sections governing the proposed use and explain in plain language what conditions they establish.”

mappealo.org/parcela/094-052-118-06

Mappealo

ES EN

PARCELA · CRIM

Uso propuesto · Centro comunitario

● 3 SECCIONES CITADAS

094-052-118-06

TEXTO CITADO · REGLAMENTO CONJUNTO 2020

“§ 6.2.4 — En distritos dotacionales (D-1), se permitirá el uso institucional comunitario siempre que la estructura no exceda el cincuenta por ciento (50%) de ocupación del solar...”

“§ 6.2.9 — Todo uso institucional deberá proveer un mínimo de un (1) espacio de estacionamiento por cada cincuenta (50) metros cuadrados de área bruta...”

“§ 9.1.2 — En terrenos dentro de zona inundable especial, se requerirá elevación mínima sobre la elevación base de inundación conforme a los mapas FIRM vigentes...”

FUENTE · Reglamento Conjunto 2020, Junta de Planificación

PROCEDENCIA · Inventario La Maraña

EN LENGUAJE SENCILLO

● INFERIDO

Sí se puede construir un centro comunitario aquí, con tres condiciones:

- **La mitad del solar debe quedar libre.** El edificio no puede cubrir más del 50% del terreno — en este solar de 2,180 m², eso son 1,090 m² máximo. **[§6.2.4]**
- **Hace falta estacionamiento.** Un espacio por cada 50 m² construidos — unos 22 espacios si se construye al máximo. **[§6.2.9]**
- **No aplica elevación por inundación.** Esta parcela queda fuera de zona inundable especial, así que §9.1.2 no le aplica. **[§9.1.2]**

Esta interpretación resume el texto citado a la izquierda. No sustituye una consulta formal con la OGPe ni una determinación de la Junta de Planificación.

1 Side by side, always

Plain language never appears without the exact section text beside it — a reader can check the interpretation in one glance.

2 Interpretation is labelled inferred

The regulation is verified; the explanation of it is not. The screen distinguishes them.

3 Applied to this parcel

Generic rules resolved into real numbers for this lot — 1,090 m², 22 spaces — and a section marked not applicable.

4 Limits stated in place

The disclaimer sits with the interpretation, not in a footer nobody reads.

Open questions for the team

DECISIONS NEEDED

Confidence taxonomy — feasibility

Verified / computed / inferred is designed here. The system must be able to tell them apart before the UI can show them. Needs an engineering spike alongside the design.

Datasets not yet loaded

Screens 04 and 05 assume cadastre (CRIM), zoning districts and transit stops. Currently we hold hazard, facility and boundary layers plus 84 municipal plans.

Public access

NYU policy currently blocks anonymous access. Org-policy exception, or move the front end to the ClimateIQ pattern? Blocks any public launch.

Inventory reconciliation

84 plans are loaded from a government manifest. These should be matched against La Maraña's official inventory before launch.

Mappealo — wireframes v2 · working draft, not final visual design
